It is not intended for private use. It is not the product key you will need to activate your copy of Windows. The product keys found in this file are there solely to inform you of the edition and version of Windows you have purchased. Obtain your official product key from the Microsoft web site. 12/09/2011 · Yes it does. The only thing I see that can cause a problem is if you don't have enough of free space on your hard drive, especially if you have a limited number of installed programs, which will add to the amount of space used. It's also important to understand how Microsoft keeps track of changes. For instance, the Windows XP SP3 that you bought may have a different version than the SP3 you have now. The change is tracked by Microsoft and is sometimes called Patch Tuesday. Other than that, Windows 10 is currently the newest. Windows 8, 7, and Vista are all older. You should always try to update to the newest version of Windows, but it is important to understand the differences, so you can decide if you want to upgrade or just stay with what you already have. When you start a Windows 7 installation CD on your computer or insert a copy of Windows 7 into your computer's disk drive, your computer detects this as a request to start the product recovery tool (if you have this on your computer). The Windows Setup program runs the recovery tool and restarts your computer in recovery mode, where you will be able to access a command line interface that has several commands available to it. From this command line, you can perform various startup actions, such as: scan disk for missing files or OS, fix startup problems, and perform system recovery. The scan of your computer's disk for missing files or problems is an important part of this recovery process, as it can actually recreate your computer's Master Boot Record (MBR) or Quick Boot File (QBT), which is a portion of your computer's disk (usually, the first 70MB or so of it) that contains important information to your computer's start up.
