I used to praise the version I had, I got even more from the Sketchbook Pro Edition, I have just started to review the software they have now, I started to find my self satisfied with the comments I had read, and I am still researching this magazine until I find further review. Before writing this review that I have always used in the past, I will share my experience from using it. First and foremost I had no filters & other enhancements, I tried this in order to get used to it. I clicked here and there, then I spent some time in the various layers. When I finished, I could not enjoy it, why? Because I think that the number of features was not enough. Now I have it, I still go to the others, but this one has become my number one.

I have disabled it, or forgot the digital artist within, but I am not complaining because I am using it. I don't know about others but some software is not for me (that I am aware of).

I have used it enough, I can appreciate doing my creativity and enjoy the software, at least I know the limitations, I have to remember all functions I need and my other work, I try to fit that in the other one.

I know it's not for everyone, but I enjoy it I have used it for years now, and for the most part nothing has changed, except for the function for the fill in the pixels. I find it a very nice tool for editing, but I never worked with layer masks, so I am not entirely sure how that can help. I usually use the cut and paste tool to be able to edit what I want. I miss the auto mask option, and the auto correct filter along with the improve filter, which I am sure was there in the original version.
